As usual I am booking orders for NOVELTY BOXES which contain a named collection of 12 dozen, (144 blooms, not bulbs,) in 12 new and unusual varieties. Daffodils should be at their peak during Easter week and orders for blooms will be accepted from March 20th until the end of the season. Delivery to any point east of Chicago guaranteed in good condition. Price \$3.00 per box which includes postage and Special Delivery.

DAFFODILS

PARADE

THE DAFFODIL, also called Jonquil or Narcissus, according to locality, is one of the most beautiful and permanent of all garden flowers; also a superb cut flower for the house, especially if not kept in a dry, heated room. The fact that the earlier varieties bloom even before winter ends is ample proof that they love cool weather. A careful reading of what follows will enable any one to plant bulbs which will give blooms over a period of from 50 to 60 days. They are among the earliest of all garden subjects, requiring little care or attention. Once planted, they will thrive and increase indefinitely. It is advisable, however, to dig, separate, and replant every 3 or 4 years as multiplication is so rapid that an area of soil that can support one bulb can not take care of 6 or 8 and allow them to produce satisfactory blooms.

The most outstanding points about the following list are the + and - figures appearing before each variety. The earliest to bloom is Christmas Glory (class 1A), and the + 32 appearing before it indicates that in an average season, it will bloom 32 days before Croesus (class 2A) which is mid-season, or peak of the blooming season variety. While Albo Pleno (class 10) with its —32 indicates its blooming time is 32 days after Croesus and 64 days later than Christmas Glory. There are hundreds of varieties that bloom between these two extremes. Those appearing on this list have been most carefully selected and are outstanding in their various classes. With a little study every one can enjoy a real DAFFODIL PARADE in a way that has never before been possible. Order bulbs now for shipment in early September while varieties are fresh in your mind and earn a 5% discount for cash, allowed ONLY during March and April. It is probable that there will again be a shortage of certain novelty types and early orders will, of course, receive preference at shipping time. If preferred, they will be sent C. O. D., also in September. Business reference: Bank of Gloucester, Gloucester, Virginia; G. W. Heath, Nuttall P. O., Gloucester, Virginia; Benjamin G. Fernald, (Member American Amaryllis Society), Wicomico, Virginia.

Any one interested in obtaining prices and blooming data on varieties not listed, can obtain them by writing me. I have printed price lists, (without descriptions,) covering the 615 varieties I sell. Also I will gladly answer any written question pertaining to your problems with Daffodils.

Regal Lilies		bulbs	2.50
Tulips—Special American Grown Garden Mixture	100	bulbs	6.50
Lily-of-the-Valley	10	pips	1.00

PLANTING INSTRUCTION FOR DAFFODILS

The main requirement for success is a well drained soil. They are not happy where water will stand for a day or two after rains. Any good garden soil is ideal. Cow Manure mixed in the soil at, or preferably before, planting time will produce blooms and bulbs of unbelievable size. Bone meal is the only safe substitute to use at planting time. A top dressing of stable manure during the winter months is always helpful; also serving as a mulch. In the Middle Atlantic States, plant deep enough so the neck of bulb is covered by 3 or 4 inches of earth after ground has settled. In the more Northern States, 4 or 5 inches is desirable; while in the Southern States, 2 or 3 inches is sufficient. All questions pertaining to their culture and care, cheerfully answered.

Planting Instructions and Special Offers

Believing that sufficient information is seldom given for success in raising certain bulbous plants, I have had growers who raise the three items listed below, prepare the following, which I hope will be most useful to my customers.

ISMENE CALATHINA, also known as Peruvian Daffodil is of the Amarylis family and is evergreen in deep south. Its imbels of large white flowers, 2 ... 4 her stem are most attractive. When gardeners become familiar with its unusual beauty and fractioned it will be much more widely planted, for not only is it a super-subject for the garden, but also a grand out flower for the nouse.

Plant in fall sun when the ground is thoroughly

Plant in fall sun when the ground is thoroughly warm. May in the middle states, June in the nothern. For best results soil should be spaded up to a depth of 2 feet and bulbs set so their base is at least 6 inches below the surface level. As roots are 2 or more feet long it can stand dry spells, but does best when viatered every two weeks.

Broad strap like leaves appear above 4 weeks after planting and the blooms on 14 to 18 mem stem? follow in a few weeks. Foliage remains green throughout the summer till killed by frost widely is nature's signal that digging time is at hand. Dig carefully with a potato fork or similar implement and avoid breaking the long fiesby root which should be left attached to bulbs.

After curing and drying for several weeks they should be stored in a warm basement of furnace room, 50 to 60 is ideal storage temperature. These bulbs require no dipping or soaking in anticeptical nor do foliage or flowers require spraying. When replanting the following spring separate only those bulbs which have detached tremselves from the root crown of the main bulb.

Price \$.25 each or \$2.00 for 10 Bulbs

STERNBERGIA LUTEA Looks like and is commented called an Autumn Crocas but is not even a leastine. It has been used extensively in the plantings at Williamsburg and deserve ats ever-growing popularity. INSIST on getting your bulbs in late Jane or early July "Not in September or October It prefers partial shade and a light sandy soil. Set

bulbs so their base is 5 mones below ground sever. Narrow dark green leaves appear late in August for-lowed soon by beautiful yellow crocus like flowers on 6 to 8 mon stems. North of Washington, D. C. protection in the form of a light mulch is advisable the 1st winter Increase is rapid and bulbs should be dug and replanted every 3 or 4 years. Dig when seaves die in the spring

Price \$2.50 for 10 Bulbs

LYCORIS RADIATA, also known as Nerme Sarmensis. Guernsey Lily and Spider Lily, Most beautiful and lasting as a cut flower and grand to plant in clumps under or near shrubs. A circle of 8 to 12 oright red flowers on a 16-inch stem Bulbs should be planted late in June or early July in partial made the type of soil does not seem to matter. Set bulbs so the neck is not more than 1 inch below surface when ground has settled. If planted deeper it will take 2 or 3 years for the bulb to adjust itself to proper depth. This years necessary shallow

planting is the reason they are not hardy north of Washington. D. C. unless headily mulched. Bulleplanted in June of July should bloom early in September without leaves, as these die in June and do not reappear till after the flowers are finished. However as it is a bulb that truly resents transplanting it may not bloom the first year, even of they are dug and planted correctly; but will surely perform it left another year when the gorgeous blooms will be ample reward for the long want Deedbest when allowed to grow into large almaps our a period of 6 to 8 years.

Price \$2.20 for 10 Bulbs

THE HODGE PODGE SHOP GLOUCISTER, VA.

ANTIQUES - CORN MEAL - GIFTS - HAMS - HANDICRAFT

AMARYLLIS ADVENUM (Oxblood Lily). Plant so neck of bulb is coveered with 4 inches of dirt. Makes winter foliage and is planted at same time as Sternbergia.

Price \$2.25 for 10 Bulbs

COOPERIA PENDUNCULATA (Texas Evening Star.) Not hardy. Plant 4 inches deep after danger of killing frests and dig before same, in fact handle same as Gladiolus.

Price \$2.25 for 10 Bulbs

IRIS—TALL BEARDED. A real bargain sale! A collector's collection of over 100 of the finest varieties ever introduced, now offered as mixed.

Price \$1.00 for 10 roots; \$4.75 for 50 roots; \$9.00 for 100 roots

LYCORIS SQUAMIGERA (Resurrection Lilly.) Giant bulbs over 9 inches in circumference. Plant early in June, deep enough so neck of bulb its covered with an inch of dirt. These LARGE bulbs will produce 2 or more bloom stalks and flower within 4 to 6 weeks.

Price \$1.50 each

Please note that all bulbs quoted in his circular are grown in Gloucester, Virginia, and are ACCLIMATED to any point on the Atlantic Coast. Their hardiness and blooming qualities are far superior to bulbs grown in the milder climates of the deep South and far West. (Trial bulbs from both localities have suffered frost damage this winter. Gloucester grown bulbs are perfectly normal.) Gloucester grown Sternbergia has proven hardy in New England and Lycoris should be equally hardy north of Philadelphia if given a southern exposure and mulched during the winter months.

BUY DEFENSE BONDS and STAMPS

THE HODGE PODGE GLOUCESTER, VA.

We are again offering Novelty Boxes of Daffodils which contain 12 dozen (144 blooms) at \$3.00 a box, including postage and Special Delivery.

Unfortunately, due to war and labor conditions, it will be impossible to deliver on any special day, though we will conform to your wishes as closely as possible and though the boxes will be packed with the same care and will be lovely as ever, we may not always be able to include twelve varieties as formerly.

We will ship from about the 22nd of March for around four weeks and welcome all orders.

Although the prices of bulbs are the same this year as last, we fear, due to the labor shortage, that we may not be able to fill all orders. However, if you will send your orders early, we will do our best to fill them and if we are unable to do so this year, we hope you will give us another chance in the future.

Sincerely yours,

THE HODGE PODGE
